

ZEDPAY CATALOG

About Us

ZedPay Financial Systems and Services P.J.S.C. , considering the support of its professional experience and distinguished background in programming development, financial technologies, provides advanced software solutions for financial institutions worldwide (such as: banks, financial institutions and electronic money companies, payment solution companies, payment gateway companies, stock markets, stock exchanges, crypto and forex exchanges, international online shop)

ZedPay has a team of experienced specialists including developers, monitoring, support and maintenance, and software engineers, and has different organizational departments (including: software, application, developer, monitoring, support, maintenance, hosting and server) and designs and provides reliable and scalable financial systems, platforms and applications with global financial standards.

Our expertise in the development of international financial systems enables us to provide high-quality solutions tailored to the needs of financial institutions.

Through our technical capabilities and experienced teams, we provide a wide range of products and services that support operational and technological infrastructures.

ZedPay Roadmap

At ZedPay, financial technology innovation and continuous development are at the core of our roadmap.

Our systems are constantly updated in line with the latest global technologies and evolving financial infrastructures.

By integrating modern Web3 solutions and advanced iBank (Internet Banking) frameworks, we ensure that our platforms remain compatible with the newest standards of the digital financial ecosystem.

We continuously improve our technology, infrastructure, and services to keep pace with the rapidly changing world of financial technology.

Our objective is to maintain modern, secure, and scalable systems that evolve alongside global innovations and support the future of digital finance.

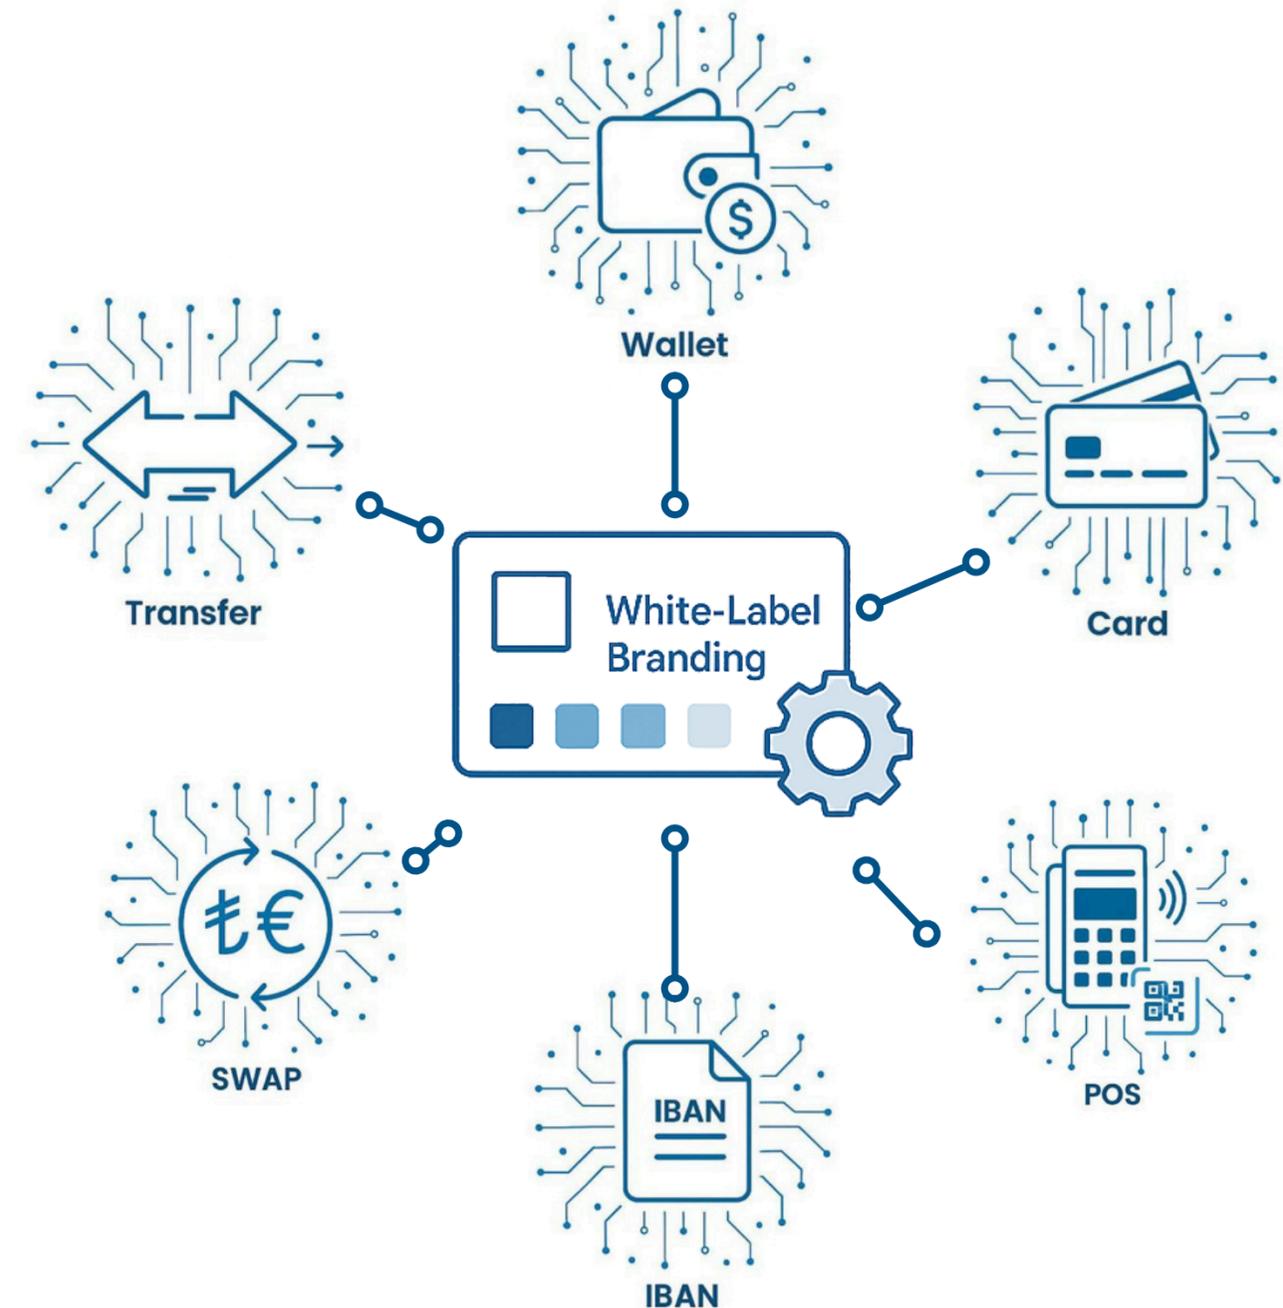

Technology Infrastructure for Financial Institutions

The solutions are provided to partner institutions through white-label deployments or API-based integrations, allowing organizations to operate advanced financial infrastructure under their own brand identity.

While the underlying technology is powered by ZedPay's infrastructure, institutions retain full control over their brand, customers, and business operations.

All systems are designed in accordance with international financial software standards and modern banking architecture, making them suitable for deployment in regulated financial environments.

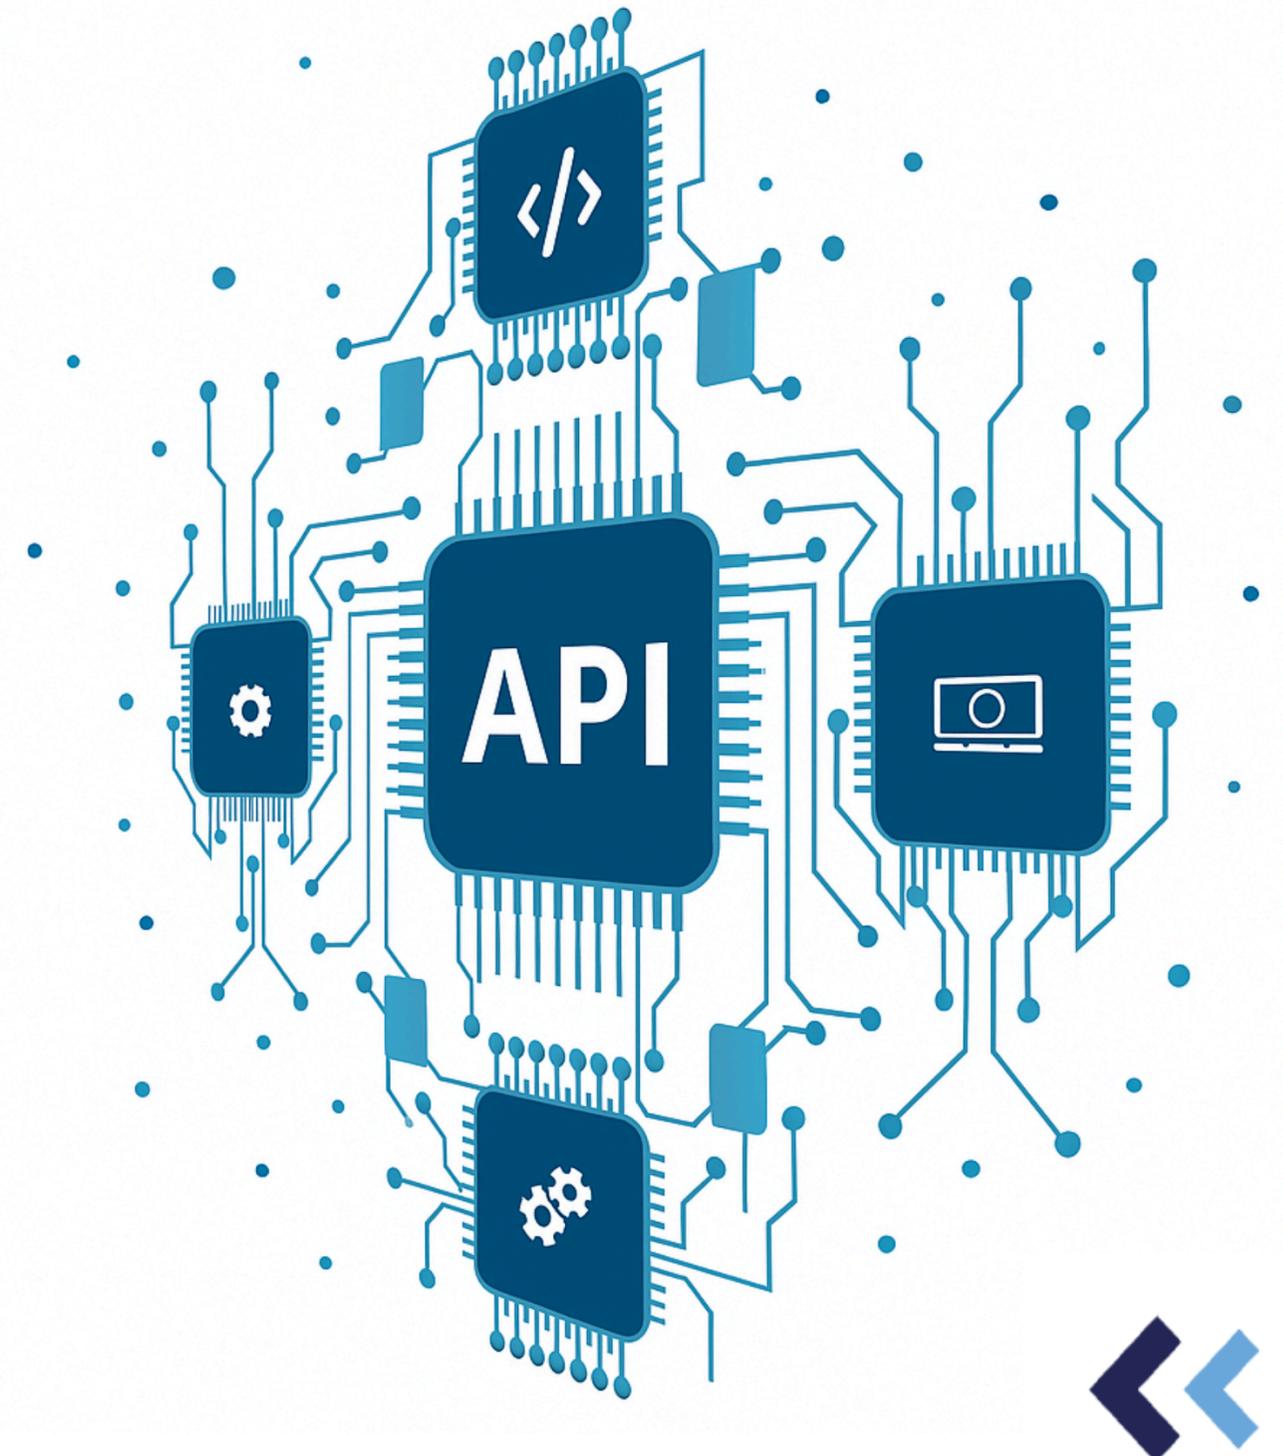

The platforms are continuously developed, maintained, and monitored by dedicated engineering and operations teams with deep experience in large-scale financial technology systems.

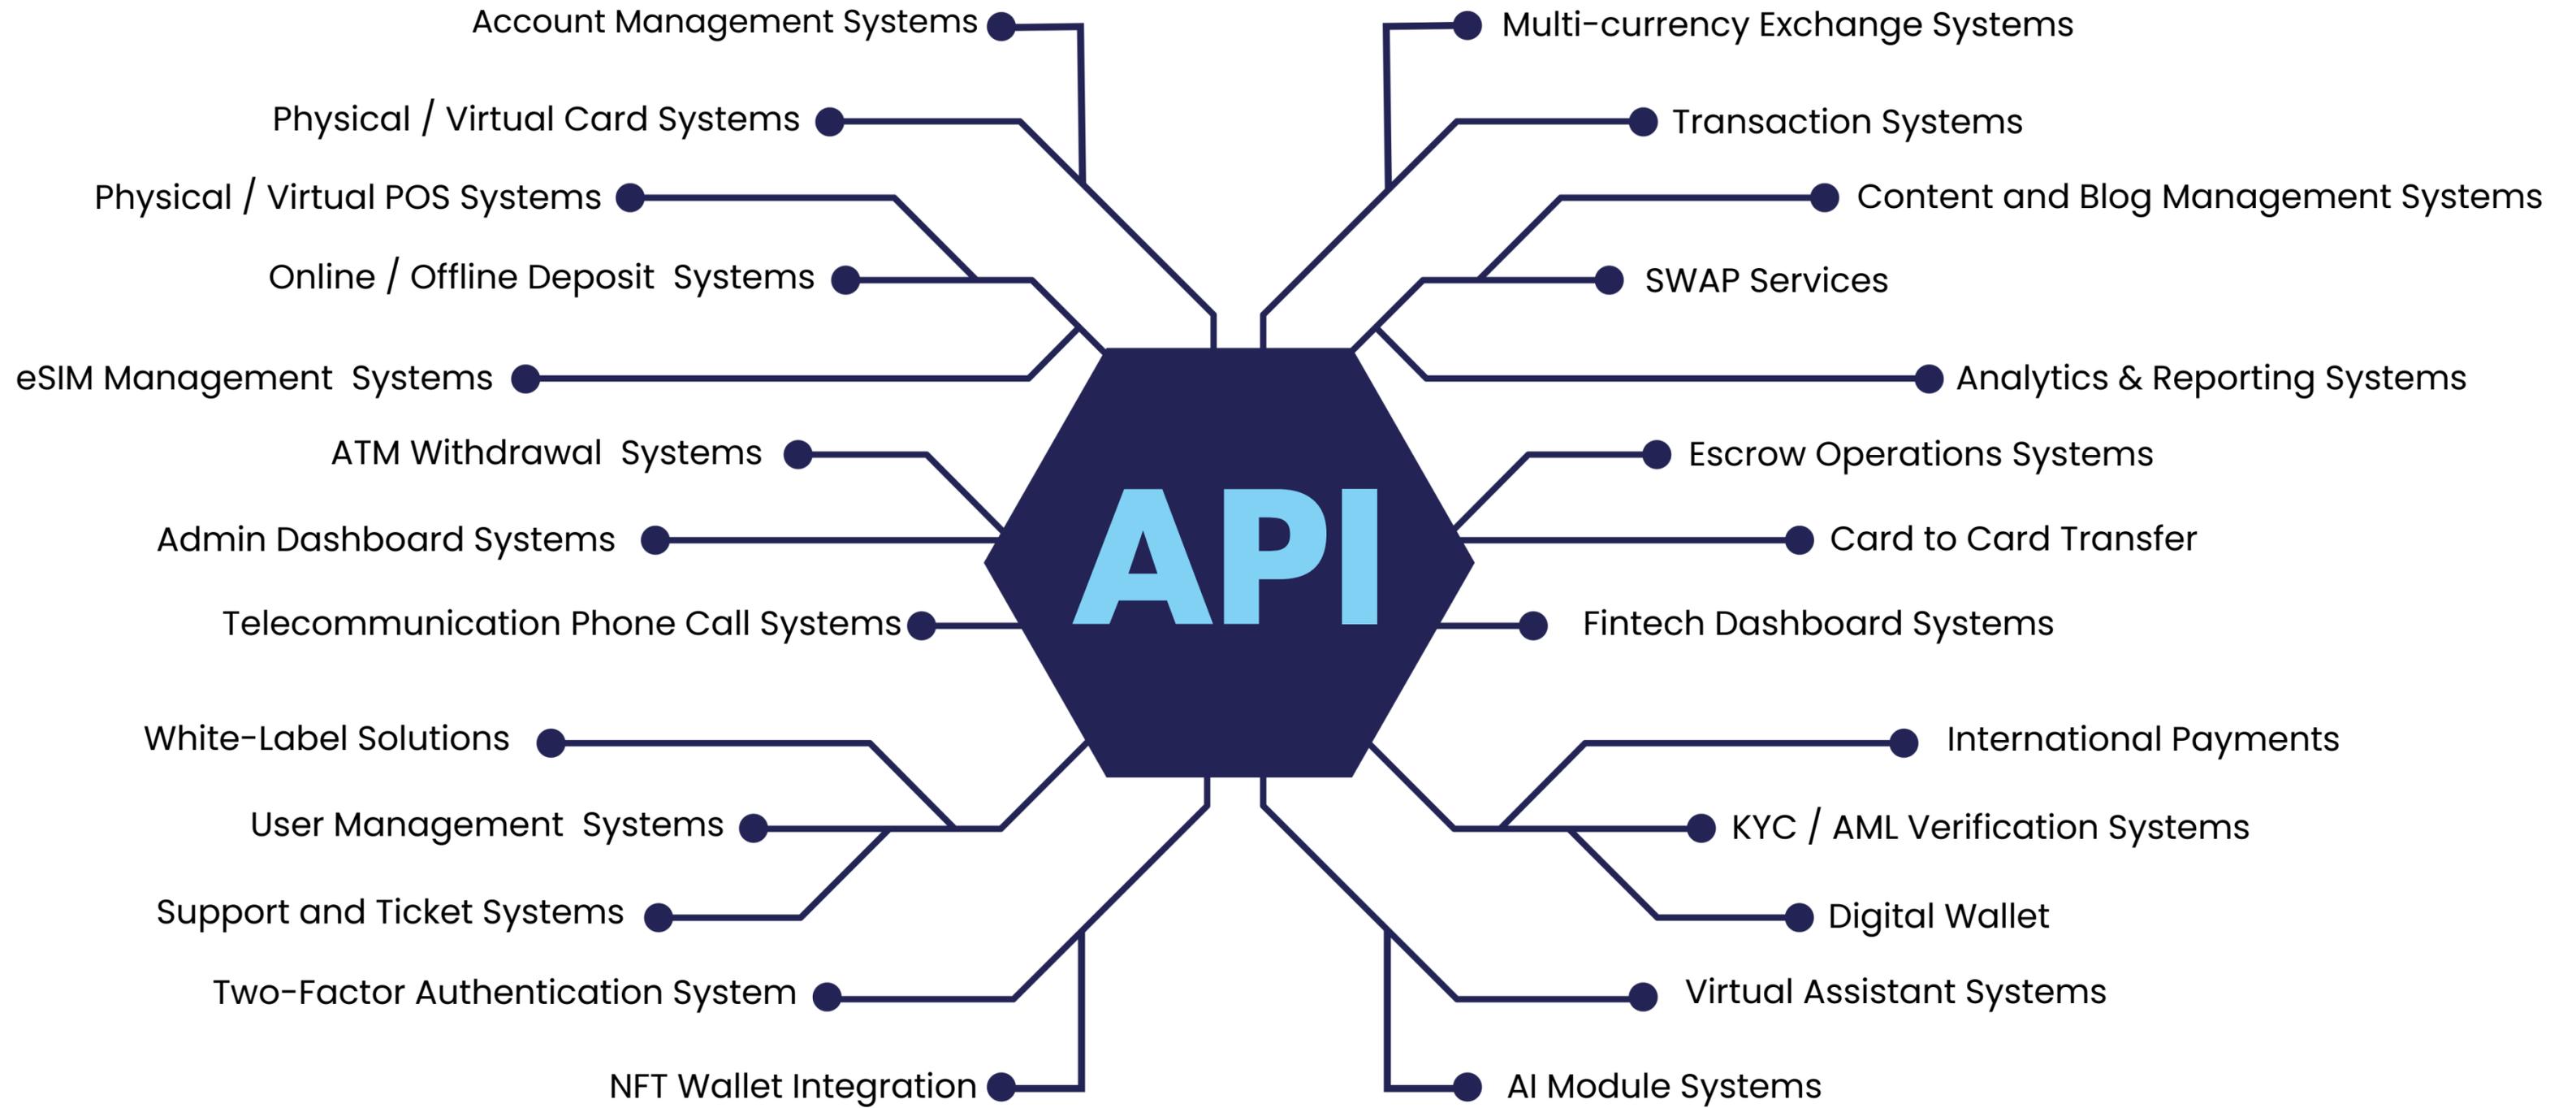

Established Technical Operational Capabilities

- Multi-currency account and IBAN infrastructure.
- Virtual and physical card issuing systems.
- Wallet and balance management modules.
- Automated KYC and AML verification engines.
- Real-time transfer and settlement systems.
- Merchant integration APIs.
- Transaction monitoring and reporting tools.
- Compliance, risk, and security frameworks.
- Agent and partner management dashboards.
- eSIM activation and management modules.
- Virtual number communication support systems.

These solutions provide a modular and scalable technology base that enables institutions to deliver efficient, compliant, and modern financial services without building or maintaining their own core systems.

FUTURE OF TRANSFERS

1. iBank Transfer Systems

Enable secure and efficient bank-to-bank transfers through advanced internet banking infrastructures, designed for reliability, regulatory compliance, and seamless financial connectivity.

2. E-Money Transfer Systems

Facilitate fast digital money transfers through modern e-money infrastructures, optimized for instant processing, operational efficiency, and scalable financial services.

3. Multi-Currency Transfer Systems

Manage and transfer multiple currencies within a unified financial ecosystem, enabling efficient cross-border transactions with speed, flexibility, and low operational costs.

4. Exchange Transfer Systems

Integrate advanced transfer mechanisms designed for crypto and financial exchanges, supporting high-volume transactions, liquidity management, and real-time settlement capabilities.

ZedPay License

ZedPay provides licensing for the use of its proprietary financial technologies and software platforms developed by our internal engineering teams.

These licenses allow financial institutions (including: Banks, PSP companies, E-Money Companies, Stock exchange, Crypto exchange NFT Platforms Forex markets and fintech companies and etc.) to legally deploy ZedPay systems within their operational infrastructure.

Through our licensing model, organizations can utilize advanced solutions such as wallet systems, payment infrastructures, trading platforms, and administrative management tools without the need to build their own core technology.

All licenses are issued under defined usage terms and may include system updates and technical support where applicable.

Customer Support

ZedPay offers 24/7 customer support via mobile app, phone, email, Telegram and live chat. It provides fast support for payment processing, analytics and guidance.
